Summary:

I'm a software developer with close to two years of experience building web applications and one year of professional experience in the fintech industry. I work primarily with JavaScript, Typescript, React, Node.js and Rust. I enjoy turning ideas into products that solve real problems. Beyond my day job, I spend much of my time building and experimenting with projects, including [Fluxa](#), a platform designed to simplify job and opportunity discovery. I enjoy the innovative nature of software development and the process of continuously learning, building and improving products that people can use.

Skills & Tools:

- JavaScript
- TypeScript
- React
- Node.js
- Rust
- GitHub
- MongoDB
- Etc...

Experience:

[Billstation](#) | Frontend Developer Intern

August 2025 – Present

- Contributed to the development and maintenance of Billstation's fintech platform, which provides services including bank transfers, fixed deposits, loans, bulk payments, and utility payments for Nigerians users.
- Developed and maintained the administrative dashboard responsible for overseeing platform-wide operations, including transactions monitoring, customer management, and role-based administrative controls.
- Built and implemented Billstation's careers platforms, enabling the company to publish and manage job vacancies through a dedicated recruitment portal.
- Developed responsive and reusable user interfaces using React and TypeScript, ensuring consistency across different sections of the platform.
- Collaborate closely with cross-functional teams in an agile startup environment to deliver features and support the continuous improvement of the company's products.
- Utilize Git and GitHub for version control, team collaboration and code integration workflows.

Project:

[Fluxa](#) | Founder & Software Developer | In Development

Tech Stack: React, TypeScript, Node.js, Express.js, MongoDB, JWT Authentication.

- Building a job and opportunity discovery platform designed to solve the fragmented nature of job searching by aggregating opportunities from multiple sources into a centralized feed.
- Architected and developed the platform's frontend and backend, implementing authentication systems, protected routes, HTTP-only cookie based jwt authentication and refresh token workflows.
- Designed the platform with a focus on user experience and real-world utility, aiming to simplify how job seekers discover and manage career opportunities.
- Independently managing the product lifecycle, from idea validation and system design to development and iterative feature implementation.

Education:

Bachelor of Engineering (B. Eng) in Civil Engineering
Federal University of Technology, Owerri (FUTO)
Graduated: 2025
