WORK EXPERIENCE

[Bill Station](#)

Internship

Frontend Web Developer

August 2025 – Current

- Independently developed the Admin Dashboard from inception to production ensuring scalability and making sure its maintainable.
- Translated UI/UX designs from the product team into responsive, reusable React components and pages.
- Integrated RESTful API endpoints provided by the backend team using `fetch()` and optimized data handling for smooth interactions.
- Applied best practices in code structure and reusability, reducing development time for new features and updates.

[Jobs Boards](#)

Personal project

Full stack Developer

June 2025 - Current

- Developed a dynamic job board where employers can post, edit, or delete job listings, and job seekers can browse and apply.
- Implemented CRUD operations (Create, Read, Update, Delete) by manipulating a mock JSON backend (stored as an array of job objects).
- Designed interactive UI components (e.g., forms for job submissions, editable fields for employers) with React state management.
- Created dedicated job pages displaying full job descriptions, employer/company details, and application options.
- Ensured real-time updates to the job array upon employer edits/deletions, providing immediate feedback to users.

ADDITIONAL INFORMATION

I am a frontend web developer with a year and some months of experience, proficient in JavaScript, TypeScript, Vue, React, HTML, Tailwind CSS and Git. Beyond professional experience, I have built several personal projects, including a portfolio for myself, jobs board, a mock CBT exam platform, a crypto tracker, and a simple calculator (all on my GitHub and portfolio), which have helped me strengthen my skills in designing and deploying functional web applications. I am committed to continuous learning and growth, eager to collaborate with like-minded professionals, share ideas, and contribute to building impactful digital solutions.
